I thought Ray had sent you a response letter concerning the new weld procedure your engineering dept. sent thru, but I can't find a copy and he isn't here today. From what I understand the company that does our aerospace welding reviewed the procedure and that they had some serious doubts about the steps outlined in the procedure. The welders indicate steps 2 thru 7 are for titanium and moly steel in which our alloy (4130) is niether. Steps 1, 8, 9, 10, 11, 12, + 13 are ok.

Please have engineering call us by phone so we can work this out and get this order finished. Also if Ray sent you a letter on this, send me a copy by fax

Thanks
Rocky Warnke
